

EDUCATION

Northeastern University <i>Masters of Science in Computer Science</i>	Sept. 2024 – Expected Aug. 2026 <i>Boston, MA</i>
DY Patil School of Engineering and Technology <i>Bachelor of Technology in Computer Science (Gold Medalist)</i>	Aug. 2020 – Aug. 2024 <i>Pune, India</i>

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C++, Go, R, Rust, TypeScript, Angular, PHP, SQL
Frameworks: React, Node.js, FastAPI, Flask, Express, Redux, Next.js, Vue, JUnit, Apache Kafka
Backend & Databases: PostgreSQL, MongoDB, MySQL, Prisma, REST API, GraphQL, DynamoDB, NoSQL, Oracle
Tools: Docker, Git, Gazebo, Linux, Terraform, Azure, Tableau, Ansible, Grafana, VScode, PyCharm, Jira, Android SDK
Specializations: Data Structures & Algorithms, Machine Learning, Data Science, Mobile Development

EXPERIENCE

Orpheus Ocean <i>Robotics Software Engineering Co-op</i>	Jan. 2026 – Expected Jun. 2026 <i>New Bedford, MA</i>
- Reduced AUV mission setup time by 70% from 2+ hours to under 30 minutes by building a full-stack web application using React, Node.js, FastAPI, and PostgreSQL that replaced manual script-based workflows with an intuitive operator interface serving 10+ marine research operators. - Enabled visual mission planning by integrating OpenMapTiles API for interactive waypoint selection with algorithm development for path planning, allowing operators to configure autonomous underwater vehicle deployments through map-based visualization. - Validated mission configurations through Gazebo simulator with 40+ test scenarios and JUnit testing, implementing RESTful APIs following SDLC with version control in collaboration with 3-person robotics team.	
Tata Consultancy Services <i>FullStack Developer Intern</i>	Nov. 2023 – Apr. 2024 <i>Mumbai, India</i>
- Increased user engagement by 35% for 2,000+ daily users by designing UI/UX wireframes in Figma and translating prototypes into accessible frontend interfaces using React.js across desktop, tablet, and mobile platforms. - Built a real-time IPL Score Tracker serving 5,000+ concurrent users using React.js, JavaScript, and MySQL, leading integration with 3-person database team to deliver run rate calculations with 99.9% accuracy. - Processed 10,000+ records daily for 3 enterprise insurance clients by developing BFSI SAP Uploader using Spring Boot and Maven, deploying on GCP with Kubernetes orchestration and Jenkins CI/CD pipeline for automated testing and deployment.	

PROJECTS

Sentiment Aura - AI Emotion Visualizer <i>React, FastAPI, Python</i>	Nov. 2025 – Dec. 2025
- Achieved <500ms sentiment analysis latency by building a real-time emotion analysis application using React, FastAPI, and Deepgram API for speech-to-text with WebSocket communication, integrating Groq LLM (Llama 3.3 70B) for AI-powered sentiment detection. - Developed dynamic Perlin noise visualization using p5.js with 2000 particles responding in real-time at 60 FPS, implementing keyword extraction and Web Audio API for microphone capture.	
FoodSocial <i>React, Node.js, PostgreSQL, Prisma, Kotlin</i>	Jan. 2025 – Feb. 2025
- Built a full-stack SaaS application using React, Node.js, Prisma ORM, and PostgreSQL with Geoapify Places API for restaurant discovery, developing a mobile application using Kotlin and Android SDK. - Implemented RESTful APIs with microservices architecture, CI/CD pipeline, and Docker containerization using Infrastructure as Code with CloudFormation, applying responsive design following agile methodologies with Jira.	
Image Processing Application <i>Java, Swing, MVC, JUnit</i>	Sept. 2024 – Dec. 2024
- Architected a GUI-based image editor supporting 10+ filter operations using MVC and Command pattern for undo/redo functionality, optimizing pixel-level manipulation using embedded systems and computer architecture concepts. - Implemented comprehensive end-to-end unit testing using JUnit and Mockito with test-driven development, applying design patterns for reliable delivery.	
Image Classification for Plant Leaf Disease <i>TensorFlow, PyTorch, Pandas</i>	May 2022 – June 2022
- Built a deep learning CNN using TensorFlow, Keras, and PyTorch to classify 38 plant diseases with 92% accuracy using transfer learning and data augmentation for CPU-only training. - Applied machine learning and computer vision with Pandas for data preprocessing. Conducted code review to ensure quality and best practices. Created a PowerBI dashboard for visualization.
