EDUCATION

Northeastern University

Masters of Science in Computer Science

Sept. 2024 – Present

Boston, MA

DY Patil School of Engineering and Technology

Bachelors in Computer Science Engineering — Gold Medalist

Aug. 2020 – Aug. 2024

Pune, India

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3, Java, R, Python, Go, Kotlin, C++, C#

Frameworks: React, Vue, Node.js, Express, JUnit, Apache Kafka, jQuery

Tools: WordPress, Github, VScode, PyCharm, DevTools, Jira, Linux, Unix, Kubernetes, JSON, Excel

Backend: MongoDB, MySQL, PostgreSQL, Prisma, Oracle SQL Developer, NoSQL, GraphQL

EXPERIENCE

Tata Consultancy Services

Nov. 2023 – Apr. 2024

Full Stack Developer Intern

Mumbai, India

- Engineered responsive IPL Score Tracker using React.js, JavaScript, and Java Swing for GUI, implementing MySQL database connections to calculate real-time run rates and player statistics with 99.9% accuracy
- Developed end-to-end BFSI SAP Uploader for insurance clients using Spring Boot and Maven, collaborating with cross-functional teams to deliver customer-focused solutions featuring enhanced user experience, real-time data validation, and seamless integration with enterprise systems.
- Implemented role-based access control system with JWT authentication, demonstrating strong problem-solving skills and attention to detail, resulting in 40% improved workflow efficiency
- Designed intuitive UI/UX design wireframes and prototypes in Figma and translated designs into responsive interfaces, increasing user engagement by 35% while ensuring web accessibility standards across devices.
- Built automated ETL pipelines and deployed backend services using Apache, Terraform, and Google Cloud to support scalable data integration, cloud computing environments, and infrastructure as code (IaC) best practices in cloud infrastructure.

Bolt IoT

Aug. 2022 – Sep. 2022

Web Developer Intern

Mumbai, India

- Developed an official company frontend webpage for Bolt IoT using React, HTML5, CSS3, and JavaScript with a growth mindset, Created early prototypes during UI development cycle to speed up design iteration.
- Implemented responsive design principles and product design concepts to ensure optimal viewing experience across all device sizes, while using version control (Git) to manage and collaborate on code efficiently.

PROJECTS

FoodSocial – DevOps for Food Discovery App | *Node.js, PostgreSQL*

Jan. 2025 – Feb. 2025

- Built and containerized a full-stack app to discover nearby restaurants, bars, food courts, and taprooms using Docker, Node.js, and the Geoapify Places API. Working on developing an android app using Kotlin.
- Developed a Jenkins based CI/CD pipeline integrated with GitHub for automated testing and multi stage deployments; used Terraform to provision AWS EC2, DNS routing.
- Deployed backend with Prisma ORM and PostgreSQL in Docker containers on AWS; enabled user plan journaling, suggestions, and private or shared recommendations.

Kanbas - Course Management Web App | *React, TypeScript, Node.js, MongoDB*

Aug. 2024 – Dec. 2024

- Engineered an educational SaaS platform with faculty and student views, implementing role-based access control and UX principles; developed modules using React hooks and automated tests for robust web application development.
- Built RESTful API with Node.js and MongoDB, following Agile and SDLC practices; emphasized software reliability with test automation, product manager collaboration, and attention to detail.

Image Processing Application | *Java, Swing, MVC, Command Pattern*

Sept. 2024 – Dec. 2024

- Architected a GUI-based image editor using Java Swing and MVC pattern; applied Command pattern for undo/redo operations. Explored low-level image operations inspired by embedded systems and computer architecture concepts to optimize pixel-level manipulation in grayscale, blur/sharpen, and sepia effects.
- Implemented Unit test using Junit to check the performance and quality assurance.

Image Classification for Plant Leaf Disease | *Machine Learning, Matplotlib, Pytorch*

May 2022 – June 2022

- Built a deep learning CNN using TensorFlow and Pandas to classify 38 plant leaf diseases with 92% accuracy; applied forecasting models, data analytics, and efficient data structures for optimized performance.
- Created a PowerBI dashboard for results visualization; incorporated data science workflows, firmware level data input, and contributed to project management and quality management for end-to-end delivery of this computer vision project with effective communication and interpersonal skills.
